ENTERPRISE CAPABILITY ORCHESTRATION (ECO)

“A digitally orchestrated capability that gives
you shared internal economy” - *Bob Howse*

WHAT IS ECO?

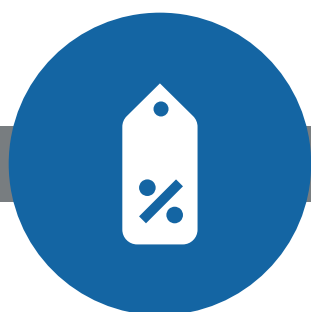

ECO was conceptualised by A1L Realizations and it was designed to transform both business and operating models of an organisation.

ECO orchestrates people, process, technology and customer experience to give you a full enterprise view of your business.

ECO facilitates decision making around investment opportunities based on Enterprise Value.

The **ECO** framework makes your business goals visible, as you will be able to see exactly how your Strategy is implemented across your **Business, Operations** and **Execution Management Capabilities**.

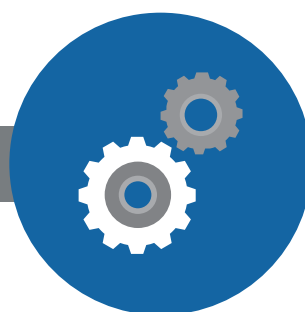

ECO equips you to respond faster to change.

"FROM STRATEGY TO REALIZATION"

ECO is a framework realised by A1L Realizations International and it transforms both the business and operating model of your organisation. The ECO framework can be deployed on most EA tools.

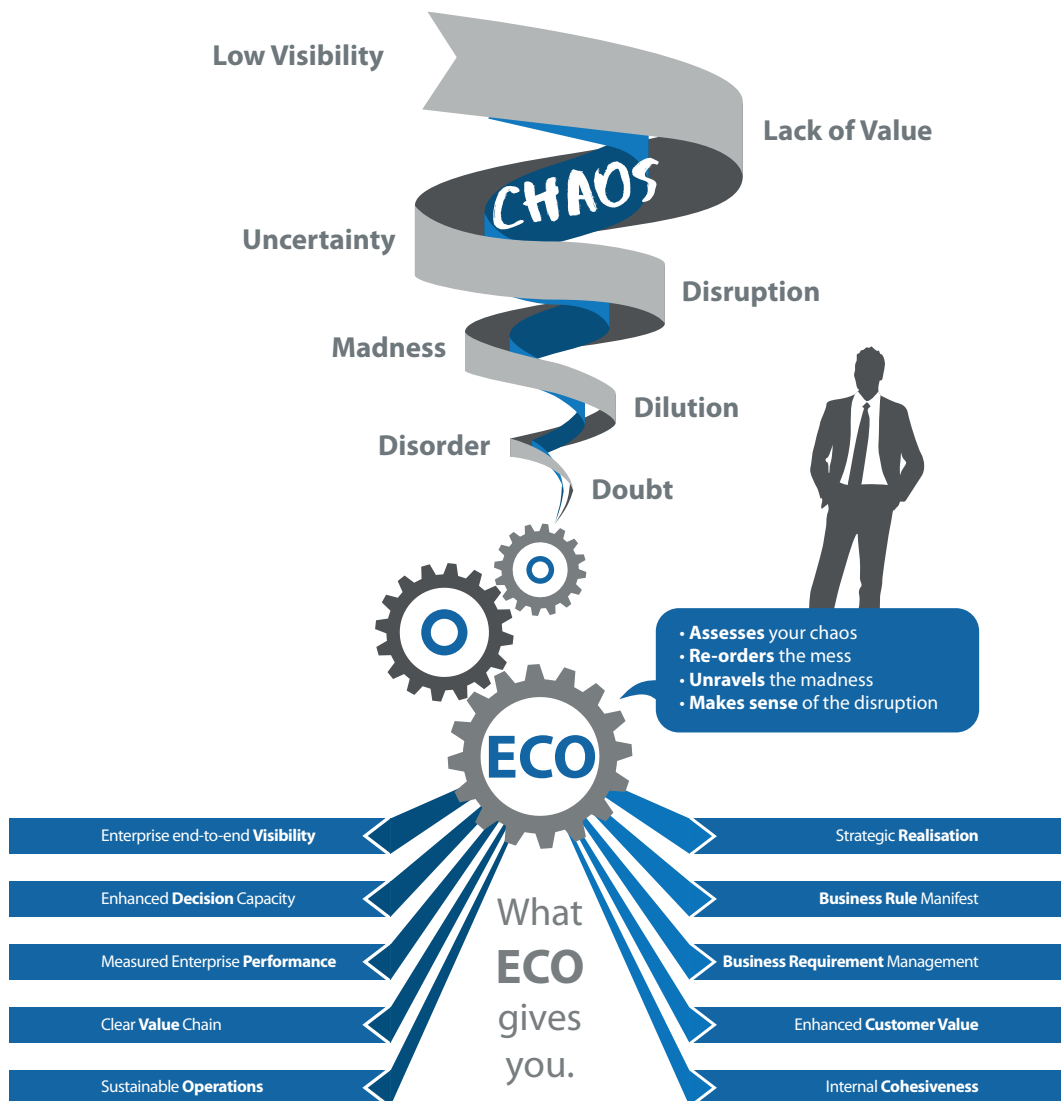

ECO

ECO orchestrates people, process, technology and customer experience to give you a full enterprise view of your business. You gain clear insight and guidance from your data.

A1L Realizations puts your entire list of IT and Business challenges into ECO

WE WILL TAKE THE CONFUSION AND MAKE SENSE OF IT.

Enhance your business for optimal bottom line performance through the alignment of effective people management, business processes and technology to achieve customer satisfaction.

THE BUSINESS CHALLENGE

In today's disruptive global economy established business models are under attack, creating chaos within your business. It becomes challenging to clearly map out a path to follow with all the clutter.

Day-to-day operations start taking precedence and Strategic rationale typically gets lost in the chaos of execution.

The end result is diminished value and a lack of competitiveness within global and local arenas.

Whilst chasing after the idealised state which a company vision brings, you lose sight of the effectiveness of a planned strategy and it becomes impossible to drive any strategic initiatives forward.

THE ECO ADVANTAGE

ECO transforms business information and activities into a structured way of looking at your organisational landscape, giving you insight into the value assurance of your strategy.

Through ECO, you can change information access points for the entire organisation. You will enable people to understand their respective roles and the impact of their decisions at any level of the organisation.

ECO will empower you to create confident strategic scenarios about the future with less assumptions. You will have unambiguous guidance towards the Financial, Risk, Technological and Process impacts of organisational change.

With only one version of the truth around, ECO creates a single way of thinking. This results in business equilibrium with shared accountability, shared vision and critical visibility of all shared outcomes.

ECO brings order to the disruption, aligning best practice business and operating models, industry frameworks, such as Six Sigma, TOGAF, BMM, eTOM, etc., to make sense of what is critical for your business in order to improve EBITDA and revenue.
